Evolutionary context provides a framework for
understanding and conserving
global biodiversity

Naeem et al. (2012)

Phylogenetic homogenization of human dominated landscapes

More *lineages*

More *species*

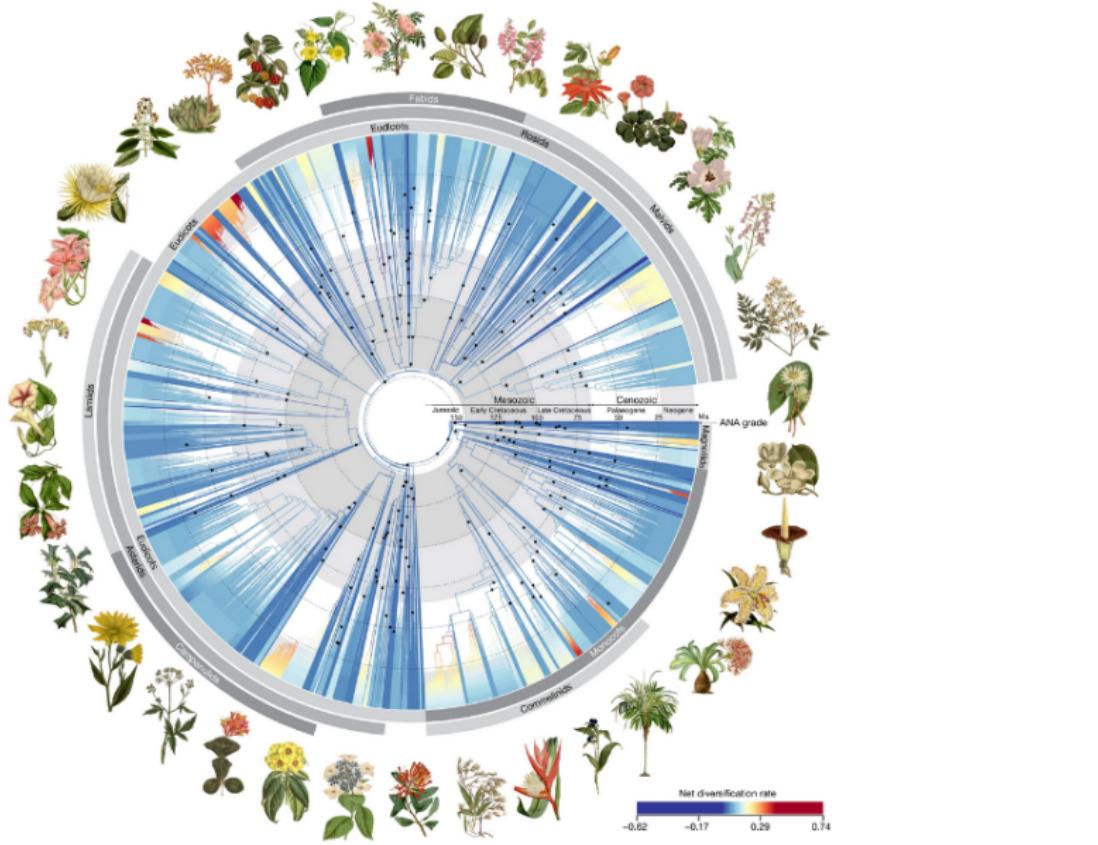

Urban gardens

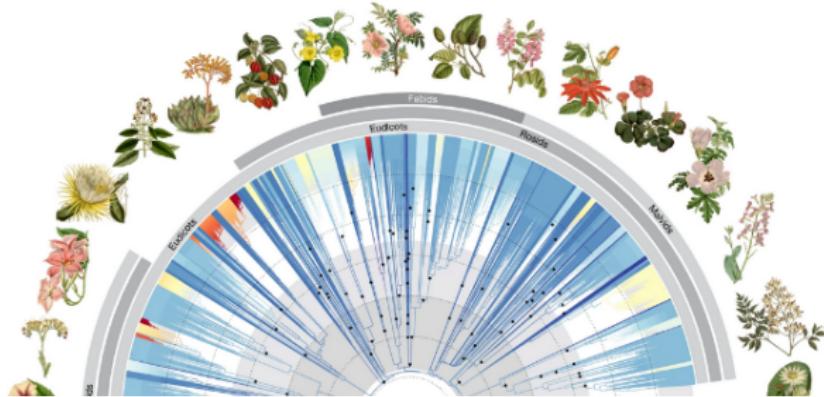

(example from the Cavender-Bares lab webpage)

*New and improved evolutionary trees are published
all the time!*

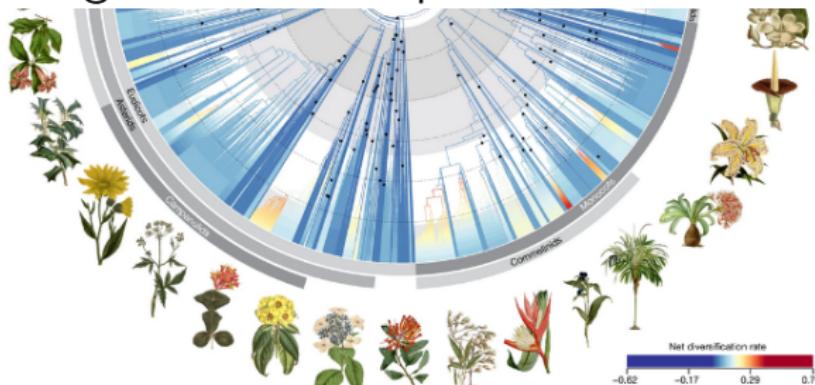

Recent publication analyzed relationships across 60% of all plant taxa - 8,000 species! (Zuntini et al. 2024)

Recent publication analyzed relationships across 60% of all plant taxa - 8,000 species! (Zuntini et al. 2024)

Amazing! But 40% of plants are still missing.

Taxonomy is often used as a proxy for shared evolutionary history

at best taxonomy is a coarse representation of evolutionary history

at worst taxonomy is a mis-representation of evolutionary history

at worst taxonomy is a mis-representation of evolutionary history

Traditional Taxonomic Groupings Mask Evolutionary History: A Molecular Phylogeny and New Classification of the Chromodorid Nudibranchs

Rebecca Fay Johnson , Terrence M. Gosliner

Johnson and Gosliner (2012)

Why do people use taxonomy as a proxy for shared evolutionary history?

Why do people use taxonomy as a proxy for shared evolutionary history?

Phylogenies:

don't include all the species we are interested in,
keep changing,
are hard to access.

Goal: Build a tree of all life.

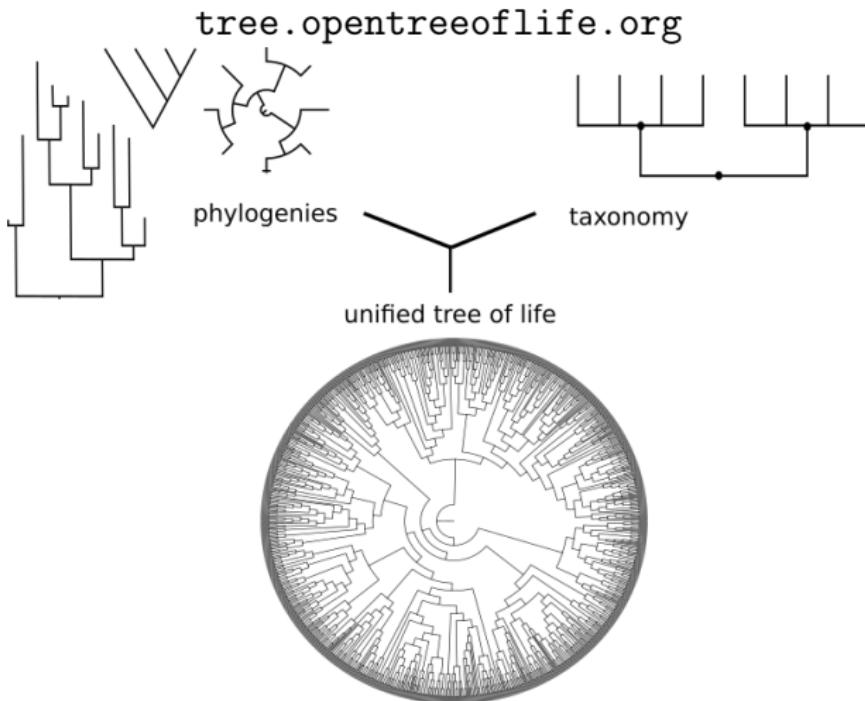

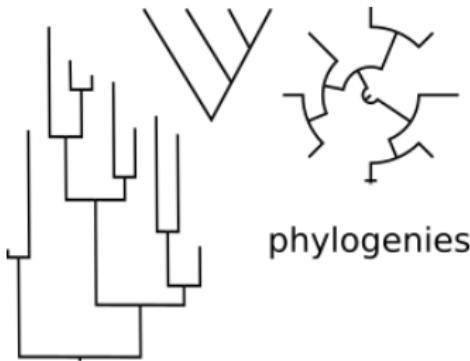

Goal: Build a tree of all life.

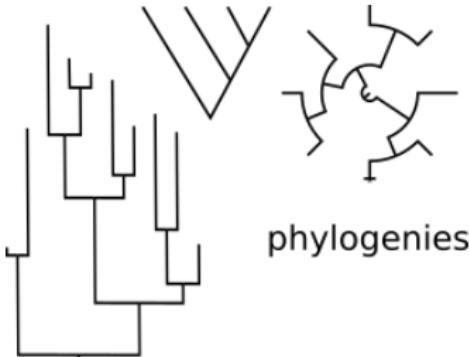

Every named species

Updated as new data becomes available

Freely and easily accessible

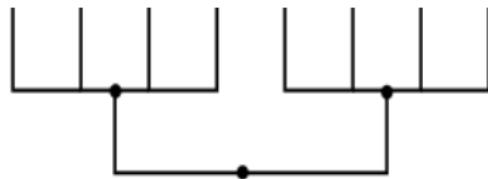

Current synthetic tree

1,362 representative phylogenies

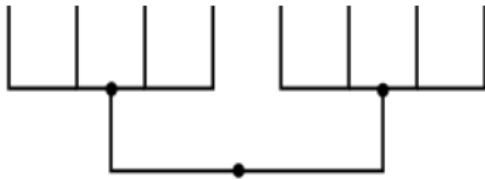

129,778 tips from phylogeny, 2,384,572 total tips.

Current draft posted July 2024, will be updated with more input trees regularly

Synthesis algorithm published in Redelings and Holder (2017), recent major speed improvements

taxonomy

taxonomy

4.5 million named taxa, around 2.4 million tips

Merges NCBI, Index fungorum, Silva, IRMNG, GBIF and other taxonomies

Scaffold for combining ranked phylogenetic estimates

New drafts released as inputs change, most recent update
June 2023

Rees and Cranston (2017)

Open Tree taxonomy: *Limulus polyphemus*

The current taxonomy version is [ott3.3 \(click for more information\)](#). See the OTT documentation for [an explanation of the taxon flags used below](#), e.g., *extinct*

Taxon details

species [*Limulus polyphemus*](#) ncbi:6850 ([worms:150514](#), [gbif:1010610](#), [irmng:10838080](#)) (OTT id 511973)
[View this taxon in the current synthetic tree](#)

Synonym(s)

[? *polyphemus*](#), [*Limulus albus*](#), [*Limulus americanus*](#), [*Limulus cyclops*](#), [*Limulus occidentalis*](#), [*Limulus sowerbii*](#), [*Xiphosura polyphemus*](#)

Lineage

[life](#) > [cellular organisms](#) > [Eukaryota](#) > [Opisthokonta](#) > [Holozoa](#) > [Metazoa](#) > [Eumetazoa](#) > [Bilateria](#) > [Protostomia](#) > [Ecdysozoa](#) > [Panarthropoda](#) > [Arthropoda](#) > [Chelicerata](#) > [Merostomata](#) > [Xiphosura](#) > [Limulidae](#) > [*Limulus*](#)

Taxonomic amendments

New taxa can be added from uploaded trees, and will be included in future synthetic trees

Opportunity to feed-back to input taxonomic resources

Adding new taxa

Once added, these taxa will appear in the Open Tree Taxonomy, and possibly in the synthetic tree, with links to your curator profile, the current study, and any additional sources that you provide below. [Hide](#)

Selected label 1 of 1 [Previous label](#) [Next label](#) * required fields

mrcaott30845ott82415/Amazonetta--Sibirionetta

We are missing phylogenetic data for many lineages.
How will we fill in the gaps?

We need to build on existing phylogenetic information.

We need to build on existing phylogenetic information.

OPEN  ACCESS Freely available online

Perspective

Lost Branches on the Tree of Life

Bryan T. Drew^{1*}, Romina Gazis², Patricia Cabezas^{3,4}, Kristen S. Swithers⁵, Jiabin Deng¹, Roseana Rodriguez¹, Laura A. Katz⁵, Keith A. Crandall⁴, David S. Hibbett², Douglas E. Soltis^{1,6}

1 University of Florida, Gainesville, Florida, United States of America, **2** Clark University, Worcester, Massachusetts, United States of America, **3** Brigham Young University, Provo, Utah, United States of America, **4** George Washington University, Washington, DC, United States of America, **5** Smith College, Northampton, Massachusetts, United States of America, **6** Florida Museum of Natural History, Gainesville, Florida, United States of America

Drew et al. (2013)

only 16% of phylogenies published 2000-2013 are digitally available

Drew et al. PLoS Biology 2013

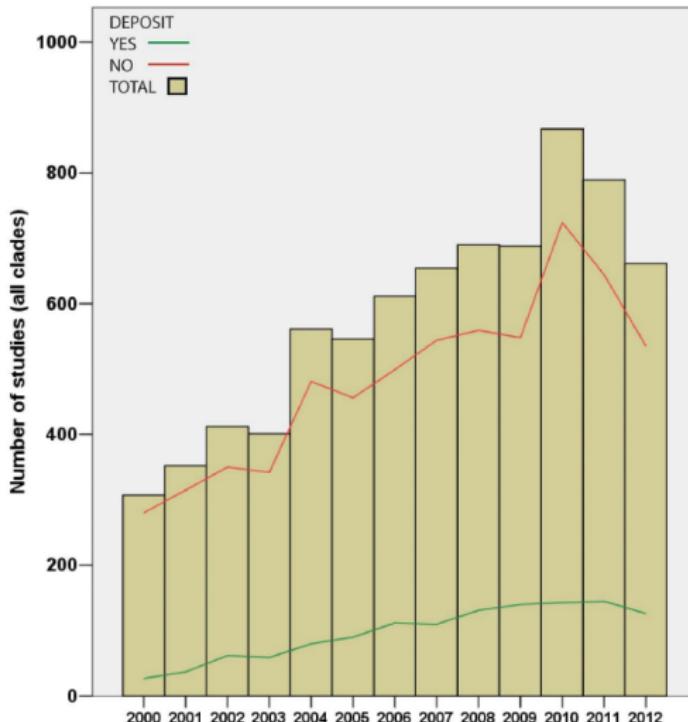

Figure 1. Overview of total number of publications surveyed from animal, fungus, seed plant, microbial eukaryote, archaea, and bacteria literature (indicated in red), and the number of those publications that archived their trees and alignments in either Dryad or TreeBASE (indicated in green).

doi:10.1371/journal.pbio.1001636.g001

only 16% of phylogenies published 2000-2013 are digitally available (Drew et al. PLoS Biology 2013)

20% of phylogenies published 2013-2018

McTavish et al. (2017)

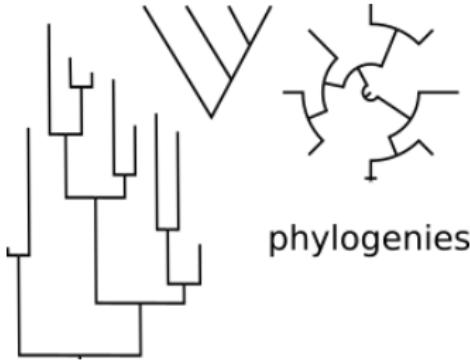

Recent multi-month outage of treebase makes future of phylogenetic data sharing even more concerning

Adding phylogenetic data to OpenTree data store

- Trees can be uploaded from any source, does not have to be own data.
- Easy to use browser based interface
- Track curation attribution by name or pseudonym
- Files are json representation of NeXML phylogenetic data format
- Data store is hosted publicly on GitHub

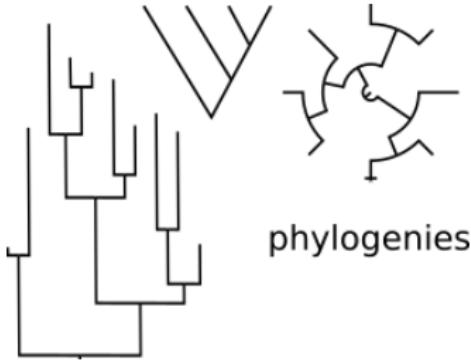

github.com/OpenTreeOfLife/phylesystem-1
McTavish et al. (2015)

Community Curation

363 individual curators of 5,241 uploaded studies

Community Curation

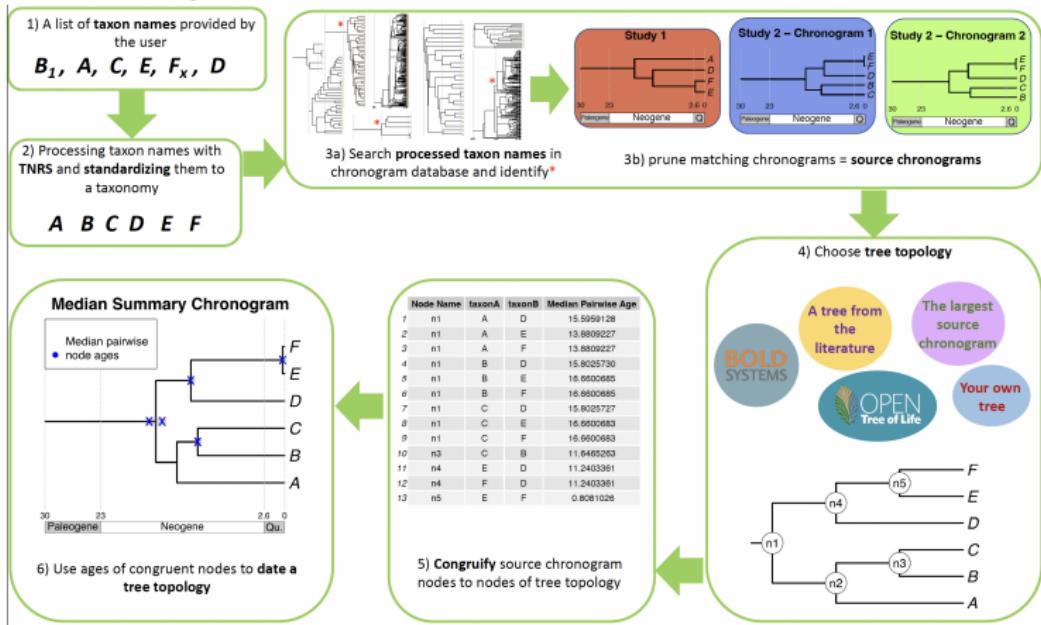

363 individual curators of 5,241 uploaded studies

Currently a several month lag for incorporation into synthetic tree

Date estimates

- The synthetic tree does not currently have any branch lengths
(when combining across DNA, morphology and taxonomy,
branch lengths are not obvious!!)
- However! We can translate dates from input trees to the
synthetic tree

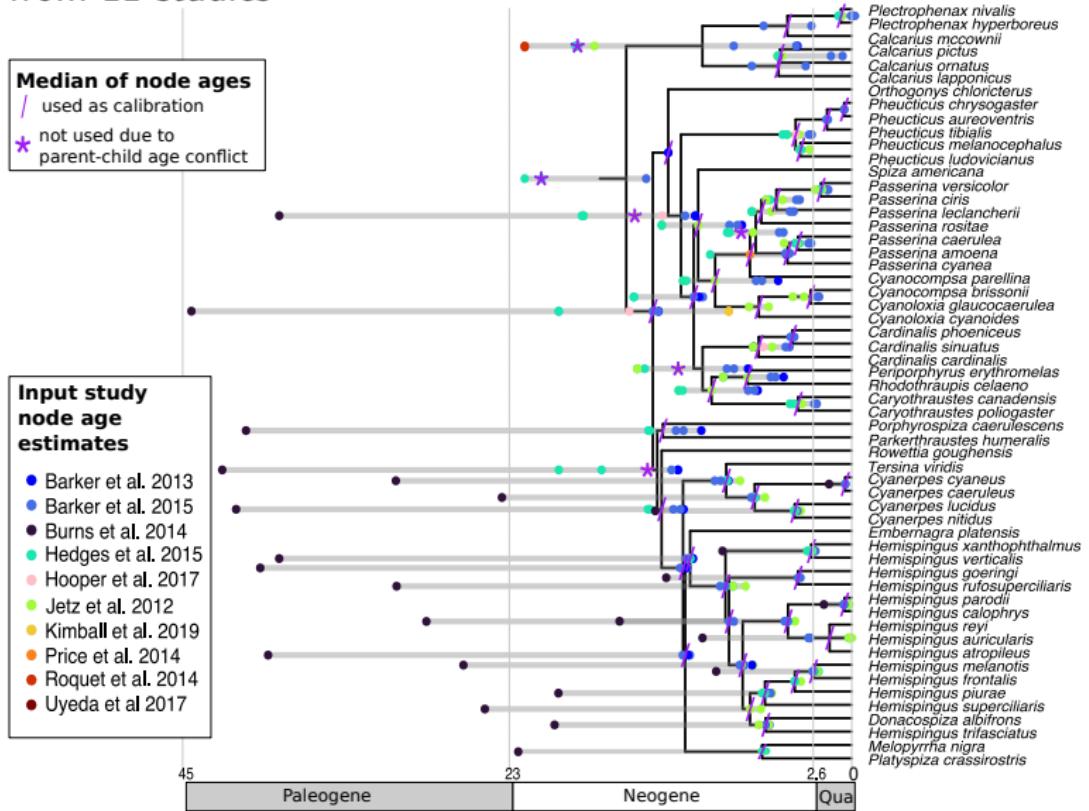

DATElife

Webserver at datelife.opentreeoflife.org

Sanchez-Reyes, McTavish, O'Meara, Systematic Biology, 2024

Dated finch tree - topology estimated based on 33 studies, dates from 11 studies

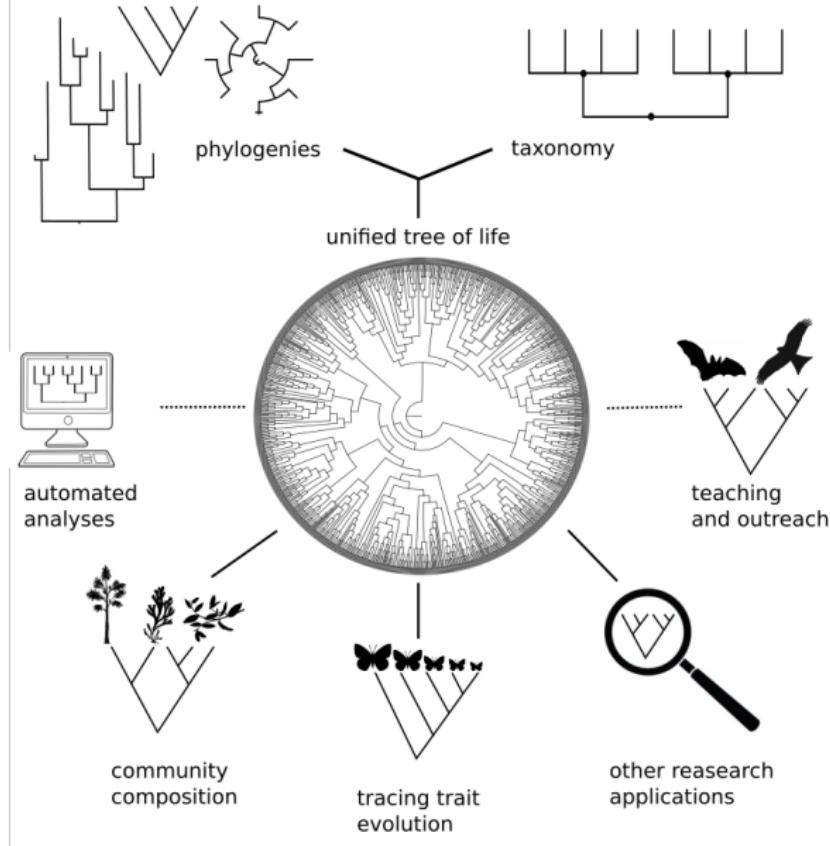

Sanchez-Reyes, McTavish, O'Meara, Systematic Biology, 2024

OpenTree Dates API

- Match internal nodes of dated inputs to nodes in the synthetic tree (phyloreferenceing approach)
- Apply dates to nodes induced subtree
- Smooth undated nodes using bladj (Webb et al. (2008))
- Beta functionality available at dates.opentreeoflife.org
- Date estimates for 46,639 internal nodes from 320 input chronograms

<https://github.com/OpenTreeOfLife/ChronoSynth>

McTavish et al. (2017)

Open Tree resources are available via a range of implementations

- Browser interface, `tree.opentreeoflife.org`
- Open Tree of Life API
- Python-opentree python wrapper McTavish et al. (2021)
- R Open Tree of Life (rotl)  Michonneau et al. (2016)

PAMELA S. SOLTIS,⁴ ROBERT P. GURALNICK,⁴ AND BENJAMIN BAISER¹

*“our results justify taking advantage of recently developed and
continuously improving synthesis trees, especially the Open Tree of
Life.” Li et al. (2019)*

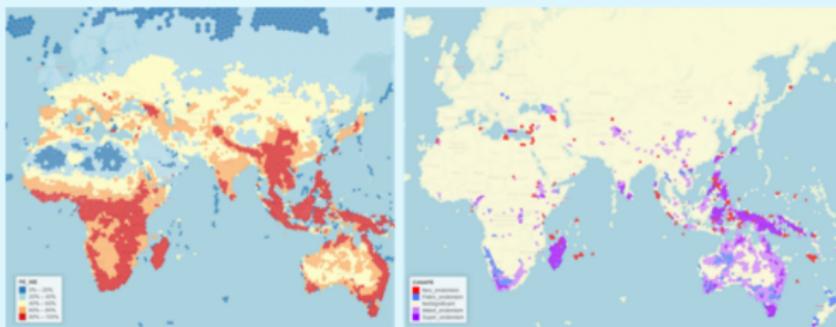

Assess phylogenetic diversity at large scales

PhyloNext: a pipeline for phylogenetic diversity analysis of GBIF-mediated data in the cloud:

Results

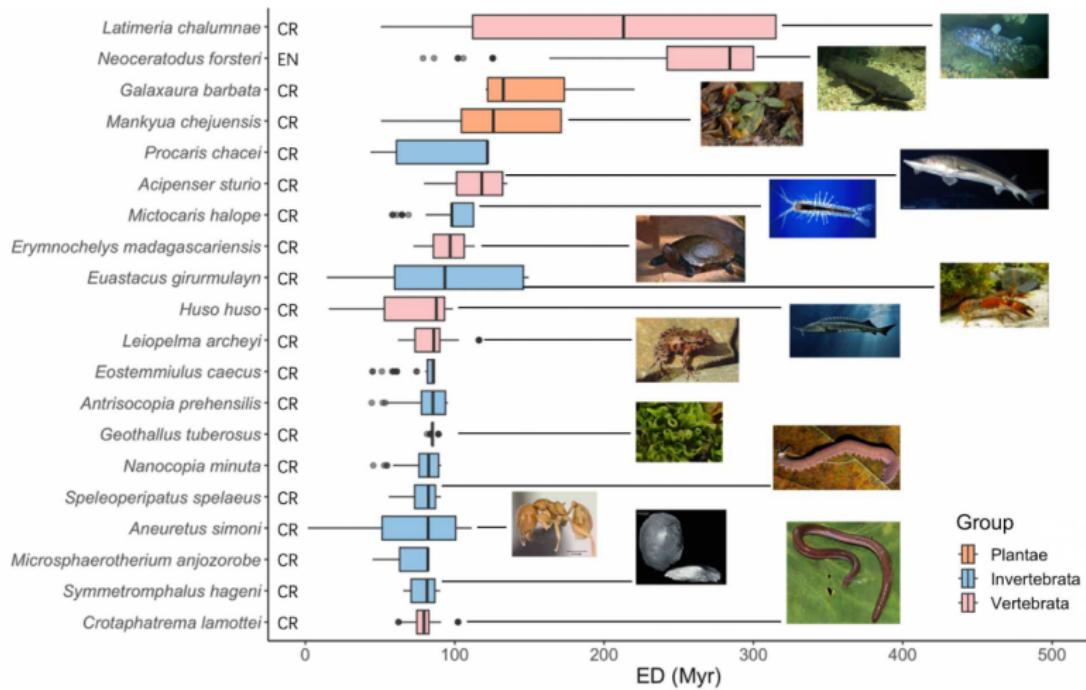

More than 350 metrics are available in [Biodiverse](#) (Laffan *et al.*, 2010) to capture multiple aspects of diversity.

Phylogenetic endemism and its types (paleo/neo)

(Mikryukov et al., 2024)

Measure potential for phylogenetic diversity loss due to extinctions

Species at risk of extinction (per IUCN red list) which could result in greatest loss of evolutionary distinct history
(Guo, McTavish, Rosindell, preprint at
<https://www.researchsquare.com/article/rs-4397985/v1>)

Easily get accurate relationships (and citations!) for arbitrary sets of species

Easily get accurate relationships (and citations!) for arbitrary sets of species

Which species with an existing reference genome is most closely related to the Society finch?

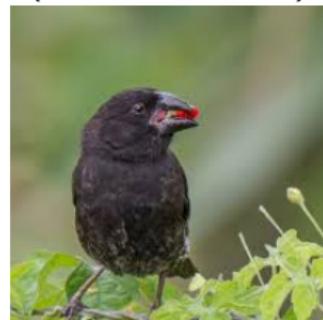

Lonchura striata domestica

Zebra finch
(*Taeniopygia guttata*)

Ground finch
(*Geospiza fortis*)

Access

via rotl package from

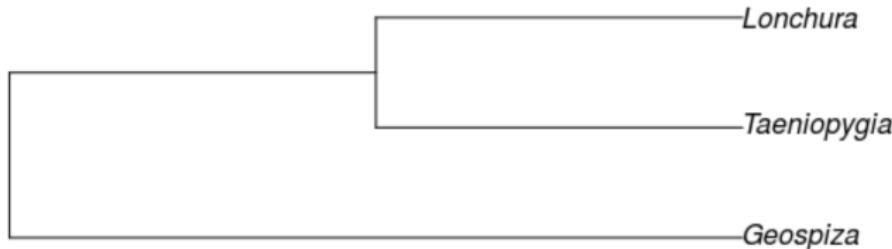

Michonneau et al. (2016))

Michonneau et al. (2016))

```
install.packages("rotl")
library(rotl)
spp <- c("Geospiza", "Taeniopygia", "Lonchura")
taxa <- tnrs_match_names(spp, context="Animals")
tr <- tol_induced_subtree(ott_id(taxa), label="name")
plot(tr)
```

Michonneau et al. (2016))

```
install.packages("rotl")
library(rotl)
spp <- c("Geospiza", "Taeniopygia", "Lonchura")
taxa <- tnrs_match_names(spp, context="Animals")
tr <- tol_induced_subtree(ott_id(taxa), label="name")
plot(tr)
```

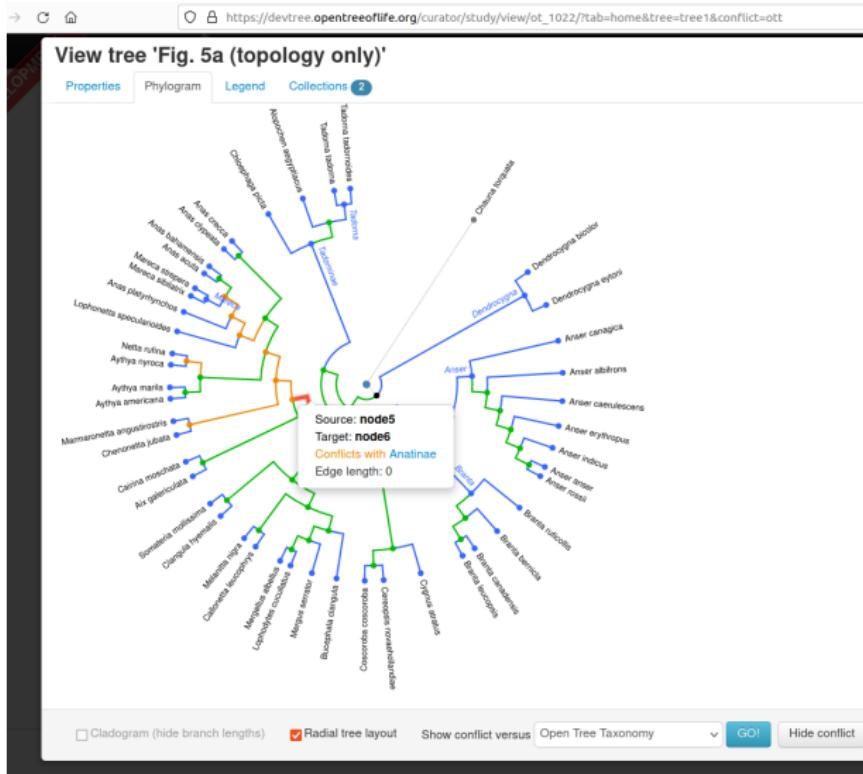

Use the zebra finch as reference!

Phylogenies generating subtree:

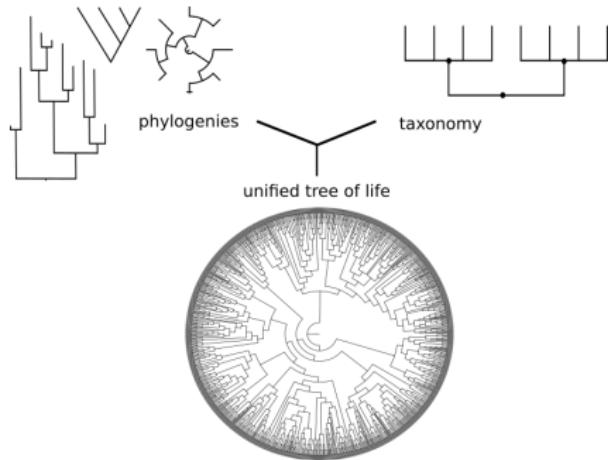

(Barker et al. 2004 PNAS; Selvatti et al. 2015 MPE; Burns et al. 2014 MPE; Barker et al. 2015 The Auk)

Compare new phylogenetic estimates to taxonomy, synthetic tree, or other phylogenies

https://tree.opentreeoflife.org/curator/study/view/ot_1022/?tab=home&tree=tree1&conflict=ott
https://tree.opentreeoflife.org/curator/study/view/ot_500/?tab=home&tree=tree1&conflict=pg_420@tree522

Generate a custom synthetic tree for your taxa

Synthesis on demand

Personal phylogeny rankings

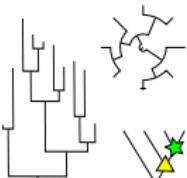

Any root node

Synthesis phylogeny of all birds (McTavish et al., 2025)

Collaboration with Eliot Miller and others at Cornell Lab of Ornithology

- 321 published trees with a total of 48,188 tips (already updated since April publication!)
- Tree files collected from treebase, online data deposits, and many, many, MANY, personal emails haranguing authors
- All input trees are deposited, with metadata, in public Open Tree phylogenetic datastore, *phylesystem*
- These trees include 9,789 of 11,017 (87%) species in the 2024 Clements taxonomy

a. input phylogenies
Phylogenetic trees from published studies.

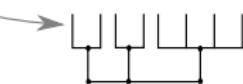

1. Map tips from input phylogenies to unified taxonomy

2. Unify ranked input phylogenies using synthesis algorithm

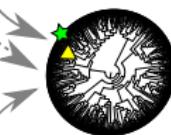

3. Match age estimates from nodes in dated input trees to internal nodes in the complete tree

b. unified taxonomy
versioned by year. Each species aligned to multiple source taxonomies (NCBI, OTT, Clements)

c. phylogeny for all species in input trees
Every branch supported by at least one input tree. Versioned by input tree set.

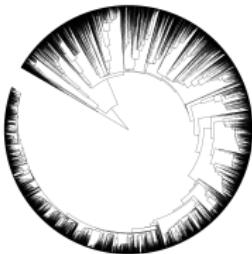

d. complete topology
Contains all taxa

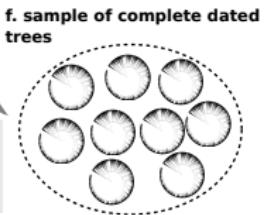

4. Use taxonomic information to stochastically place taxa absent from phylogenies

5. Apply dated nodes as calibration; smooth branch lengths

e. dated phylogeny for all species in eBird taxonomy

6. Repeat random component of taxon addition process + dating

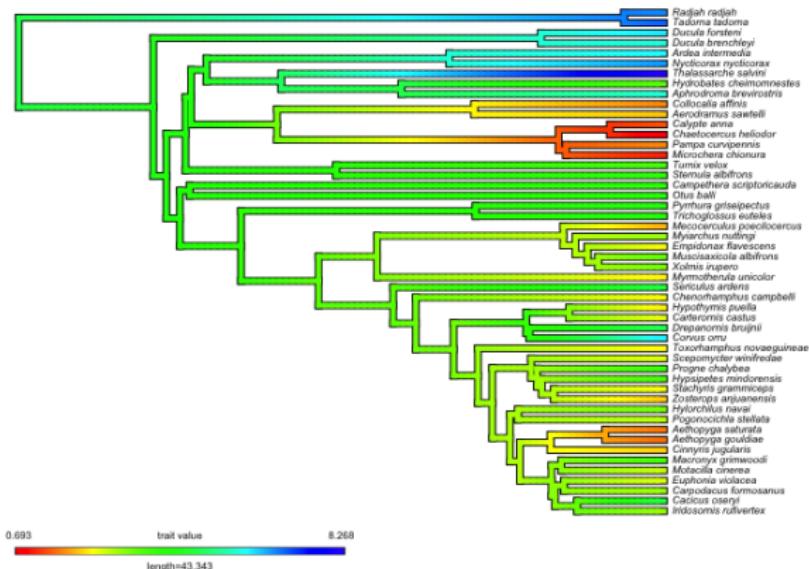

Data products in <https://github.com/McTavishLab/AvesData>

Synthesis phylogeny of all birds - 87% phylogenetic coverage

McTavish et al. (2025)

R package to access bird trees available on CRAN *clootl*
Easy to access the phylogeny, and connect to large scale data sets.

Log body mass of sampled birds, using AVONET data (Tobias et al., 2022) Tutorial at <https://github.com/eliotmiller/clootl/blob/master/examples/avonet.md>

We're applying this approach to other taxa - currently fish (actinopterygii), ants, and amphibians. Get in touch if you're interested in being involved!

Conclusions

Phylogenetic estimates should be freely accessible and reusable

Open Tree tools cross-link phylogenetic and taxonomic information

A variety of tools and approaches provides wide access to Open Tree resources

Contribute your knowledge!
